8. Checkout & Cart Customisations
9. SEO Basics & Performance Tips
10. Backing Up & Updating the Theme
11. Generating the PDF Guide
12. Helpful Resources & Support

1. Getting Started – Accessing the Dashboard

1. Open your browser and go to `https://your-domain.com/wp-admin`.
2. Log in with the credentials provided by the developer.
3. You will land on the **WordPress Dashboard**.

> Preview unavailable _Replace the placeholder with a screenshot of the login screen.

2. Theme Customizer – Updating Site Appearance

1. From the left menu choose **Appearance** → **Customize**.
2. The WearLab customizer contains the following sections:
    - **Site Identity** – logo, site title, tagline.
    - **Header & Footer** – edit menu locations, widget areas.
    - **Home – Social & Community Showcase** – upload images for the social-media banner and edit the linked URLs.
    - **Colors & Typography** – adjust primary colours, font families.
3. All changes are previewed live. Click **Publish** when you are happy.

> Preview unavailable

3. Managing Products

Adding a New Product

1. **Products** → **Add New**.
2. Fill in:
    - **Product name** – e.g., *Vibes T-Shirt*.
    - **Description** – use the visual editor; you can add shortcodes, images, etc.
    - **Product image** – click **Set product image** and upload a high-resolution picture (recommended 1200 × 1200 px). The theme now displays images **uncropped**, so the whole picture is visible.
    - **Product gallery** – add additional views.
    - **Product data** – set **Regular price** (e.g., 1800 Rs for Vibes) and **Sale price** if needed.
    - **Attributes** – add *Size* (S, M, L, XL). For XL, we'll apply a surcharge in the Shipping section (see below).
3. Click **Publish**.

> Preview unavailable

Editing an Existing Product

1. **Products** → **All Products**, locate the product, click **Edit**.

2. Change any field (price, description, images). Remember to **Update** at the bottom.

Image Guidelines

- Use **JPEG or PNG**.
- Minimum width: 600 px for thumbnail cards, 1200 px for single product view.
- Do **not** crop; the theme uses `object-fit: contain` to preserve the whole image.
- After uploading, click **Regenerate Thumbnails** (if you have the plugin) to ensure all sizes are refreshed.

4. Shipping & Delivery Settings

The client requested specific delivery rules:

- **Standard delivery charge: 250 Rs** (applied to every order).
- **XL size surcharge: +100 Rs** per XL product.
- **Free delivery** when the cart contains **3 or more shirts**.

Configure the Base Delivery Charge

1. **WooCommerce → Settings → Shipping**.
2. Click **Add shipping zone** (or edit the existing zone).
3. Inside the zone, click **Add shipping method**, choose **Flat rate**, then click **Edit**.
4. Set **Cost** to `250`. Save.

Add an XL Size Surcharge

1. Install (once) the free plugin **WooCommerce Extra Charges to Payment Gateway (or similar)** – but the client prefers **no new plugins**. We can achieve it with a small snippet (already added to `functions.php`). The snippet adds **100 Rs** when a product of attribute `size=XL` is in the cart.
2. No further action needed; the surcharge appears automatically on checkout.

Free Delivery for 3+ Shirts

1. In the same **Flat rate** method, click **Add cost rule** (if using the **Table Rate Shipping** plugin) – however the theme already contains a custom rule in `functions.php` that checks cart quantity and sets the shipping cost to **0** when **quantity ≥ 3**.
2. Verify by adding 3 shirts to the cart; the shipping total should become **0**.

> **Note:** If you ever need to tweak these amounts, edit the constants in `functions.php` (search for `DELIVERY_CHARGE`, `XL_SURCHARGE`).

5. Managing Orders

1. **WooCommerce → Orders** to see a list of all orders.
2. Click an order to view details, change **order status** (Processing → Completed), or add **order notes**.
3. When an order is marked **Completed**, the system automatically sends:
   - An email to the **admin** (configured under **WooCommerce → Settings → Emails**).
   - A WhatsApp notification (the site includes a small integration that posts to the configured Twilio/WhatsApp number – see `functions.php` for the webhook URL).
4. To resend the "Thank-you" email, open the order and click **Resend email**.

6. Managing Customers / Users

- **Users → All Users** – view and edit customer accounts.
- To change a password, edit the user and click **Generate password**.
- Assign the **Customer** role for shoppers, **Subscriber** or **Administrator** as needed.

7. Content Management – Pages, Posts, Menus, Widgets

Area	How to edit
Pages	**Pages → All Pages**, click **Edit**. Use the Gutenberg editor to add blocks, images, etc.
Posts (blog)	**Posts → All Posts**, same workflow as pages.
Menus	**Appearance → Menus** – drag-and-drop items, assign to **Primary** or **Footer** locations.
Widgets	**Appearance → Widgets** – add text, image, or custom HTML widgets to the footer or sidebar areas.

8. Checkout & Cart Customisations

- The cart sidebar now opens correctly when the **Add to Cart** button is clicked.
- The **Buy Now** button redirects to the **Checkout** page.

- After a successful purchase, the **Thank-you** page displays order details and a friendly message.
- Email and WhatsApp notifications are handled by the snippet in `functions.php`.

9. SEO Basics & Performance Tips

1. **SEO Settings** – Install the free **Yoast SEO** plugin (if not already). Run the setup wizard and fill in:
    - Site title, meta description.
    - Open Graph data for social sharing.
2. **Performance** – The theme includes lazy-loading of images and minified CSS/JS. To keep the site under **1 second** load time:
    - Use a caching plugin like **WP Super Cache**.
    - Enable GZIP compression (most hosts do this automatically).
    - Serve images via **WebP** (WordPress can generate these automatically).
3. **Responsive Design** – The theme uses a mobile-first CSS grid, so all sections adapt to phones, tablets, and desktops. Test with Chrome DevTools > Toggle device toolbar.

10. Backing Up & Updating the Theme

1. **Backup** – Use **UpdraftPlus** (or your host's backup feature) to create a full site backup before any changes.
2. **Updating the Theme**
    - The latest version of the WearLab theme is packaged as `wearlab.zip` on the developer's Desktop.
    - To upload a new version:
        1. **Appearance** → **Themes** → **Add New** → **Upload Theme**.
        2. Choose the updated `wearlab.zip` and click **Install Now**.
        3. After installation, click **Activate** (the current theme will be overridden but settings remain preserved).
    - Keep a copy of the previous ZIP in a safe folder in case you need to revert.

11. Generating the PDF Guide

The Markdown file you are reading can be turned into a PDF in two simple ways:

Option 1 – Pandoc (recommended)

```
powershell
# Install Pandoc if not already installed
choco install pandoc -y
# Convert to PDF (requires a LaTeX engine, e.g., MikTeX)
 pandoc wearlab_client_handover_guide.md -o wearlab_client_handover_guide.pdf
```

Option 2 – Online Converter

1. Open https://markdown2pdf.com or any similar site.
2. Paste the Markdown content or upload the `.md` file.
3. Download the generated PDF.

> After you replace the placeholder images in the `assets/screenshots/` folder, re-run the conversion – the PDF will embed the real screenshots.
